

CARE FOR THE FUTURE

Beef farmers and ranchers **care deeply for the environment**. They want to care for the land that was passed on from their ancestors and leave it **better for future generations**.^{3,6}

STEWARD NATURAL RESOURCES

Cattle producers are committed to constantly improving the way they manage natural resources. In fact, the cattle industry has **reduced its water use by 29%** since 1993.²

PROTECT OPEN SPACES FOR OUTDOOR RECREATION

The land that cattle graze on not only **protects the habitats of hundreds of animals**, but it **allows people to enjoy the outdoors by biking, hiking, camping and more**.¹

ENRICH THE SOIL THROUGH CARBON SEQUESTRATION

When cattle graze on land, **their manure enriches the soil**, which enables healthy plants to grow. This nutrient cycle also allows for **carbon sequestration**.⁴

TURN PLANTS INTO PROTEIN

Cattle use their unique stomachs to **upcycle plants that humans can't eat** and turn them into high-quality, delicious protein – beef!

REDUCE FOOD WASTE FOR SUSTAINABILITY

More than **one third of food is wasted in the United States**. If you want to make your food choices more sustainable, **consider reducing your food waste**.⁵
