## Welcome

Confident Cooking with Beef is a comprehensive guide to selecting, preparing and cooking beef. Created by beef professionals for you, the beef enthusiast, this resource will bolster your knowledge, giving you added confidence when working with beef. With tips and tricks, comprehensive cooking lessons and timing charts, you’ll have what you need to ensure beef success every time!

Confident Cooking with Beef also serves as a companion to *BeefItsWhatsForDinner.com*, the ultimate resource for all things beef. Visit the website for recipes, a deep dive into beef cuts, beef nutrition and raising beef information.

**STORAGE TIP**

Ground beef is more perishable than roasts or steaks. Plan to use refrigerated ground beef within 1 to 2 days of purchase.

## Understanding the Label

The meat package label identifies the kind of meat (i.e. beef), the primal cut and the cut name. It also includes the weight, price per pound, total price, sell-by date and safe handling instructions. It may also include a grade, nutrition and preparation information.

Ground Beef packages are labeled according to USDA standards. The information on the labels will be expressed as the percent lean to percent fat ratio (80% Lean/20% Fat, for example).

### What to Look For

- Select beef with a bright cherry-red color. Beef in a sealed bag typically has a darker purplish-red color. When exposed to the air, it will turn a bright red.
- Choose beef that is firm to the touch.
- Make sure the package is cold with no holes or tears.
- Choose packages without excessive liquid.
- Purchase beef on or before the sell-by date.

## Storing Beef

### Keep it Safe

When shopping, pick up beef just before checking out. If it will take longer than 30 minutes to get it home, consider keeping it cold in a cooler.

### At-Home Storage

- Refrigerate or freeze as soon as possible after purchasing.
- Place beef packages on the lowest shelf in your refrigerator on a plate or tray to catch any juices.
- If you plan to freeze your beef, think ahead to your weeknight meals and re-package it into right-size portions for you and your family.
- You can freeze beef in its original packaging up to two weeks. For longer storage, wrap in heavy-duty aluminum foil or place in a plastic freezer bag, removing as much air as possible.
- Label each package with the date, name of beef cut and weight and/or number or servings.
- Refrigerate leftovers promptly after serving (within 2 hours of cooking).

### Refrigerator and Freezer Storage Guidelines

Beef Cut	Refrigerator	Freezer
	35°F to 40°F	0°F or below
<b>Fresh Beef</b>	<b>From Purchase Date</b>	
Steaks, Roasts	3 to 4 days	6 to 12 months
Stew Meat, Kabobs or Strips	2 to 3 days	6 to 12 months
Ground Beef	1 to 2 days	3 to 4 months
<b>Leftover Cooked Beef</b>		
All	3 to 4 days	2 to 3 months

## Defrosting and Cleaning

### Defrosting Guidelines

For best quality, defrost beef in the refrigerator, never at room temperature. Place the frozen package on a plate or tray, to catch any juices, and place in the refrigerator according to chart.

Forget to take your ground beef out? According to the USDA, you can defrost it in the microwave, but it must be cooked the same day.

Beef Cut	Package Thickness	Approximate Refrigeration Time (35°F to 40°F)
Steaks, Ground Beef	½ to ¾ inch	12 hours
Stew Meat, Kabobs, Strips	1 to 1½ inches	24 hours
Small Roasts	Varies	3 to 5 hours per pound
Large Roasts	Varies	4 to 7 hours per pound

### Keeping it Clean

To avoid cross-contamination and prevent foodborne illnesses, follow these easy steps:

- Wash hands well in hot, soapy water before and after handling raw meat and other fresh foods.
- Keep raw meat and meat juices away from other foods, both in the refrigerator and during preparation.
- Wash all utensils, cutting surfaces and counters with hot, soapy water after contact with raw meat.
- Keep carving boards separate from other food preparation areas and serving platters.

## Beef Tips and Tricks

- Use a gentle touch with ground beef. Over-mixing will result in burgers, meatballs or meatloaves with a firm texture.
- Before cooking, pat steaks and roasts dry with paper towels for better browning.
- When stir-frying, partially freeze steaks for about 30 minutes for easier slicing.
- When roasting or broiling, place steaks or roasts on a rack in a roasting or broiler pan to allow fat to drip away during cooking.
- For kabobs, cut steak into uniform pieces to ensure even cooking. Thread steak pieces onto skewers leaving small spaces between them. Loose or tight spacing can cause beef to cook unevenly.
- Use the pan size specified in the recipe. If the pan is too small, the beef will be crowded and browning will be inhibited. If the pan is too large, overcooking may result.
- When cooking with acidic ingredients, such as tomatoes, citrus juices or wine, use pans with non-reactive interior surface such as nonstick, anodized aluminum or stainless steel. Reactive metals such as aluminum and cast iron can affect the taste and color for dishes with acidic ingredients.
- High heat can overcook or char the outside of beef cuts while the interior remains underdone.
- There is no need to bring beef to room temperature before cooking - straight from the refrigerator works effectively.
- Turn steaks and roasts with tongs. Avoid using a fork, which will pierce the beef and result in the loss of flavorful juices.
- Turn ground beef patties with a spatula. Do not press down on the patty, or flavorful juices will be lost, resulting in a dry burger.
- Salt beef after cooking or browning. Salting beef before cooking draws out moisture and restricts the flavor that browning imparts.

#### MARINADE & RUB RECIPES

Scan here for recipe ideas that are sure to please.

## MARINADES & RUBS

Most cuts taste great with just a pinch of salt and pepper, but take your steak or roast to new flavor heights with a marinade or rub. Use our marinade and rub tips and recipes to help take your next meal to another level.

### Marinade Quick Tips

- Always marinate in the refrigerator, never at room temperature.
- Allow  $\frac{1}{4}$  to  $\frac{1}{2}$  cup of marinade for every pound of beef.
- Marinate in a food-safe plastic bag or in a non-reactive container such as glass or plastic. Turn or stir the beef occasionally to allow even exposure to the marinade.
- Before cooking, remove beef from marinade and pat dry with a paper towel to promote even browning and prevent steaming.
- If a marinade is to be used for basting or as a sauce, reserve a portion of it before adding it to the beef. Marinade that has been in contact with uncooked meat must be brought to a full rolling boil for a least one minute before it can be used for basting or as a sauce.

### Rub Quick Tips

- Dry rubs consist of herbs, spices and other dry seasonings.
- Paste-type rubs which are perfect for roasts, contain small amounts of wet ingredients, such as oil, crushed garlic, or mustard.
- Rubs can be applied just before cooking or up to 2 hours in advance and refrigerated until cooking time.
- Simply combine the ingredients and apply evenly to all sides. Cook beef to desired doneness.

# Determining Doneness

## DETERMINING DONENESS

For steaks (1/2 inch or thicker), insert an instant-read thermometer horizontally from the side, so that it penetrates the thickest part or the center of the steak, not touching bone or fat.

MEDIUM RARE  
{145°}

MEDIUM  
{160°}

WELL DONE  
{170°}

## Steaks

- Insert an instant-read thermometer horizontally from the side so it penetrates the thickest part or the center of the steak, not touching bone or fat.
- After cooking, let steaks rest 5-10 minutes before serving.

## Ground Beef

- Insert an instant-read thermometer into the center or thickest part of a meatloaf or meatball, or horizontally from the side into the center for patties.
- All cooking times in this brochure are for fresh or thoroughly thawed ground beef. Ground beef (patties, meatloaves, meatballs) should be cooked to an internal temperature of 160°F (medium doneness). Color is not a reliable indicator of ground beef doneness.
- Due to the natural nitrate content of certain ingredients often used in meatloaf, such as onions, celery and bell peppers, meatloaf may remain pink even when a 160°F internal temperature has been reached.

## Roasts

- Insert an ovenproof meat thermometer prior to roasting (into the thickest part of the roast, not resting in fat or touching bone) and leave in throughout the cooking process.
- Or, insert an instant-read thermometer toward end of cooking time (as described above) for about 15 seconds. Remove thermometer; continue cooking, if necessary.
- Allow 15 to 20 minutes resting time. Temperature will continue to rise 5°F to 15°F after removing from oven, to reach desired doneness.

# Most Common Beef Cuts and Recommended Cooking Methods

\* Marinate before cooking for best results + This cut meets the government guidelines for lean, based on cooked servings, visible fat trimmed.

A cut of cooked fresh meat is considered "lean" when it contains less than 10 grams of total fat, 4.5 grams or less of saturated fat and less than 95 mg of cholesterol per 100 grams (3½ oz) and per RACC (Reference Amount Customarily Consumed), which is 85 grams (3 oz).

# Grading Beef

Beef grading sets the standards for the various quality levels of beef. The beef grading program uses highly trained specialists and sometimes grading instruments to determine the official quality grade. Beef quality grading is voluntary and administered by the USDA and paid for by beef packers.

The grade is primarily determined by the degree of marbling — the small flecks of fat within the beef muscle. Marbling provides flavor, tenderness and juiciness to beef and improves overall palatability. Other grading factors include animal age, and color and texture of the muscle.

Let's explore the different beef grades.

## PRIME

Prime beef is produced from young, well-fed cattle. It has abundant marbling and is produced in smaller quantities than other grades. Prime roasts and steaks are excellent for roasting, grilling or broiling.

## CHOICE

Choice beef is high quality and produced in highest quantity, but has less marbling than Prime. Choice roasts and steaks, especially from the rib and loin, will be very tender, juicy and flavorful. They are suited for roasting, grilling and broiling. Less tender cuts are perfect for slow-cooking.

## SELECT

Select beef is slightly leaner than Prime and Choice because it has less marbling. It can lack some tenderness, flavor and juiciness as compared to the higher grades. Select grade beef often benefits from slow-cooking or from marination prior to grilling or broiling.

Scan here to learn more about **beef grades and marbling** at [www.BeeftsWithatsForDinner.com/cuts/beef-grades](http://www.BeeftsWithatsForDinner.com/cuts/beef-grades)

# Know Your Beef Choices

Like the farmers and ranchers who choose how best to raise their cattle for beef, you have choices when it comes to the beef you buy. Cattle are raised responsibly and beef is safe, wholesome and nutritious – but you may see a variety of statements that reflect different production practices on beef packages in your grocery store or on a menu. The U.S. Department of Agriculture (USDA) approves these labels for beef based on specific criteria.

## GRAIN-FINISHED

*(most beef is raised this way and likely doesn't have a specific label claim)*

THIS BEEF COMES FROM CATTLE THAT...

- Spend the majority of their lives eating grass or forage
- Spend 4-6 months at a feedyard eating a balanced diet of grains, local feed ingredients, like potato hulls or sugar beets, and hay or forage
- May or may not be given U.S. Food and Drug Administration (FDA)-approved antibiotics to treat, prevent or control disease and/or growth-promoting hormones

## CERTIFIED ORGANIC

THIS BEEF COMES FROM CATTLE THAT...

- Never receive any antibiotics or growth-promoting hormones
- May be either grain- or grass-finished, as long as the USDA's Agriculture Marketing Service (AMS) certifies the feed is 100% organically grown
- May spend time at a feedyard

## GRASS-FINISHED OR GRASS-FED

THIS BEEF COMES FROM CATTLE THAT...

- Spend their whole lives eating grass or forage
- May also eat grass, forage, hay or silage at a feedyard
- May or may not be given FDA-approved antibiotics to treat, prevent or control disease and/or growth-promoting hormones

## NATURALLY RAISED

*(may be referred to as "never-ever")*

THIS BEEF COMES FROM CATTLE THAT...

- Never receive any antibiotics or growth-promoting hormones
- May be either grain- or grass-finished
- May spend time at a feedyard

### BEEF STRIP STEAKS WITH BALSAMIC GRILLED VEGETABLES

Scan here for the recipe and nutritional data.

# GRILLING

This is a popular method for preparing steak, but it's also the one that tends to worry a lot of beginner cooks. When you follow these steps (and allow yourself a little practice), you'll find grilling is easy and—most importantly—very satisfying.

1

#### PREP PAYS OFF

Some grill experts emphasize the importance of bringing steaks to room temperature before grilling, but we don't recommend it for food safety reasons. Likewise, our cooking chart is based on the meat going directly from chill to grill. So plan on pulling the meat from the fridge, seasoning well, and getting started right away.

2

#### FIRE IT UP

Make sure your grill is clean (to prevent flare-ups) and the rack is well-oiled (to prevent sticking). If you're using charcoal, follow the directions for how much you'll need and how to build the charcoal pile. For gas grills, refer to your owner's manual and set the grill to medium-high.

3

#### GRILL, BABY, GRILL

Use an ovenproof or instant-read thermometer to monitor doneness, and let it go—don't flip the steaks too much! One flip is usually all you need, but take care to avoid charring or burning and be ready to turn down the heat (or move to a cooler spot on the grill) if necessary. Keep in mind the internal temperature will continue to rise for a few minutes after coming off the grill.

4

#### REST & RELAX

Here's another step novice cooks often overlook: resting the meat before serving—even if you're hungry. It's seriously worth the wait, because it prevents all those tasty juices from draining onto your plate. For most grill-friendly cuts, about five minutes is enough.

5

#### FINISHING TOUCHES

If you're slicing the steak before serving, be sure to cut across the grain to optimize tenderness.

#### GLOSSARY

##### Grain

Although grain is an important part of raising beef, in this case it refers to the direction of the muscle fibers in a cut of meat. Slicing "across the grain" means slicing perpendicular to the direction of the fibers, which helps make the meat easier to chew.

#### COOKING TIP

It's not a good idea to cut into a steak or burger to see if it's done. You'll lose juices and risk drying out the meat. Instead, rely on your thermometer to tell you when it's done.

# GRILLING GUIDELINES

Beef Cut	Weight/Thickness	Charcoal Approximate Total Cooking Time Medium Rare (145°F) to Medium (160°F) (minutes)	Gas Approximate Total Cooking Time Medium Rare (145°F) to Medium (160°F) (minutes)

<b>Plate &amp; Flank</b>	Eye Of Round Steak (marinate)	3/4 inch	10 to 12	10 to 12
		1 inch	13 to 15	17 to 19
	Skirt Steak (marinate)	1 to 1-1/2 pounds (4 to 6 inch portions)	7 to 12	8 to 12
<b>Others</b>	Flank Steak (marinate)	1-1/2 to 2 pounds	11 to 16	16 to 21
	Kabobs, beef only	1 x 1-1/4 inch cubes (1 pound)	5 to 7	7 to 9
<b>Ground Beef</b>	Ground Beef Patties	1/2 inch (4 ounces each)	8 to 10	13 to 14
	<b>Cook to medium (160°F) doneness</b>	3/4 inch (6 ounces each)	11 to 15	7 to 9

\* Remove from grill when internal temperature(s) reaches 135°F for medium rare; 150°F for medium doneness. Let stand 5 minutes.

\*\* Remove from grill when internal temperature(s) reaches 140°F for medium rare; 155°F for medium doneness. Let stand 5 minutes.

## Charcoal and Gas Grilling

For charcoal grilling, when coals are medium ash-covered (approximately 30 minutes), spread in a single layer and check cooking temperature. Position cooking grid. To check temperature, cautiously hold the palm of your hand above the coals at cooking height. Count the number of seconds you can hold your hand in that position before the heat forces you to pull it away; approximately 4 seconds for medium heat.

For gas grilling, brands vary greatly and grilling times may need to be adjusted. Consult owner's manual for specific grilling information.

Trim visible fat before grilling to help prevent flare-ups. If food is grilled over too high heat, the exterior can become overcooked or charred before the interior reaches the desired doneness. Charring is not recommended.

### BRAISED SHORT RIBS WITH RED WINE SAUCE

Scan here for the recipe and nutritional data.

The beauty of braising is how it turns less-tender cuts into rich, fork-tender dishes. The key is to cook the beef in liquid over low heat for several hours. If you use pre-cut chunks, make sure they're not too small (think at least the size of a golf ball), because they tend to overcook.

1

#### PREHEAT & PREP

Braising can be done on your stovetop, in a slow cooker or in the oven, depending on your recipe. Before you start preparing the beef, be sure to pat it dry with paper towels. This helps it brown more evenly. If your recipe calls for a spice rub or seasoning mix, now's the time to sprinkle it on. Salt and pepper work great, too. It also helps to chop up any vegetables you'll be using later.

2

#### BROWN THE BEEF

Most every braising recipe calls for browning the meat on all sides, usually over medium-high heat, until it develops a rich brown color. Be careful not to brown it for too long so it doesn't burn.

3

#### SAUTÉ THE VEGETABLES

Most braising recipes include a variety of chopped vegetables, such as carrots, celery, onions and garlic. Chefs call these aromatics, and you're about to find out why (your kitchen will soon smell amazing). Add them to a pan and sauté until they begin to soften. If your recipe doesn't call for vegetables, it's ok to skip this step.

4

#### SAVE THE FLAVOR

See those brown bits clinging to the bottom of the pan? They're chock full of flavor. When your aromatics have softened and the pan is still hot, slowly add some liquid—such as beef broth, wine, juices or even water—and scrape up the bits with a wooden spoon or heat-resistant rubber spatula. This technique is called deglazing, and it helps make your dish delicious.

5

#### ALL TOGETHER NOW

Carefully return the meat to the pan or slow cooker. Depending on your recipe, now's the time to add more liquid, such as the beef broth or wine you used for deglazing. Then turn down the heat per your recipe, cover it with a tight-fitting lid and let that moist heat work its magic.

6

#### FINISHING TOUCHES

You'll know it's done when the beef is fork-tender. Some braising recipes can go straight from the stovetop, slow cooker or oven to your table. Or you can remove the beef and vegetables, strain the liquid, and combine it with a roux (mixture of butter and flour) to make a great sauce.

# BRAISING

**COOKING TIP**

—

You'll be mighty tempted, but it's important to avoid lifting the lid, which releases valuable heat and moisture and can significantly increase the cooking time.

## BRAISING GUIDELINES

	Beef Cut	Weight/ Thickness	Approx Covered Simmer Time (hours)
<b>Chuck</b>	Arm Roast, Boneless	2-1/2 to 3-1/2 pounds	1-3/4 to 2-3/4
	Blade Roast, Boneless	2-1/2 to 3-1/2 pounds	2-1/4 to 3-1/4
	Shoulder Roast, Boneless	2-1/2 to 3-1/2 pounds	2-1/4 to 3-1/4
	Short Ribs, Boneless	1-1/2 pounds	1-3/4 to 2-1/2
	Short Ribs, Bone-In	2-1/2 to 2-3/4 pounds	1-3/4 to 2-1/2
	7-Bone Chuck Roast	2-1/4 to 2-1/2 pounds	2-1/4 to 2-1/2
	Cross Rib Chuck Roast	1 to 1-1/2 pounds	2-1/2 to 2-3/4
	Country-Style Ribs	1-1/2 to 2 pounds	1-3/4 to 2
<b>Round</b>	Bottom Round Roast, Boneless	3 to 4 pounds	2-1/2 to 3-1/2
	Rump Roast, Boneless	3 to 4 pounds	2-1/2 to 3-1/2
	Bottom Round Steak, Boneless	3/4 to 1-inch	1-1/4 to 1-1/2
<b>Shank &amp; Brisket</b>	Brisket	2-1/2 to 3-1/2 pounds	2-1/2 to 3
	Cross Cut Shank	1 to 1-1/2 inch thick (3 pounds)	2 to 3

**GINGER-SOY MARINATED TOP  
ROUND STEAK**

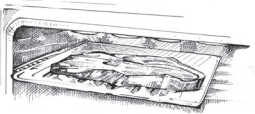

Scan here for the recipe and  
nutritional data.

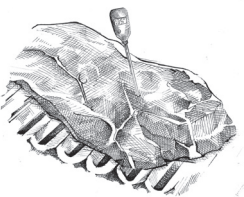

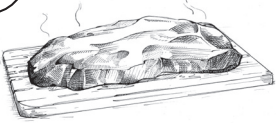

## BROILING

Broiling is similar to grilling in that it uses direct dry heat—only the heat comes from above instead of below. You'll have the best results with cuts that are relatively flat and of even thickness.

**1**  **PREHEAT & PREP**  
Pull your beef from the fridge and season generously, per your recipe. Then turn on the broiler (we recommend reviewing the owner's manual for your oven if you have any questions about how this function works). It's best to use a broiler pan for even cooking and to catch drippings. Keep a timer handy.

**2**  **UNDER THE BROILER**  
Broiling works best if the meat is close to the broiler, about 2–4 inches. Start the timer when you slide the steak under the broiler. Depending on your oven, you may need to keep the door open slightly. Follow the timing in your recipe or our cooking chart, flipping the beef once halfway through.

**3**  **ARE WE DONE YET?**  
A couple minutes before you reach the recommended time, quickly check your steak for doneness. An instant-read thermometer is your best bet. Keep in mind the internal temperature of your steak will continue to rise for a few minutes after pulling it out of the oven.

**4**  **GIVE IT A REST**  
Even though it's going to look delicious (and you're probably getting hungry), be sure to let the steak rest for at least five minutes before cutting into it. Set it on a serving plate and cover it loosely with aluminum foil. This step is essential because it helps keep your steak juicy, rather than having all those juices drain out onto your plate.

**5**  **FINISHING TOUCHES**  
Be sure to slice your steak across the grain—that is, most steak cuts are longer than they are wide, so slice across the narrow part of the steak. Then top your broiled steak with a bit of compound butter or serve with your favorite sauce.

**GLOSSARY**  
**The Maillard Reaction**  
Ever wonder why that dark crust on a steak makes it taste so good? It's because of the Maillard (pronounced "my-yard") reaction, which happens when high heat transforms amino acids and sugars on the surface of the meat.

**COOKING TIP**  
Line your broiler pan (or the bottom of your oven) with aluminum foil for easy clean-up.

# BROILING GUIDELINES

Approximate  
Total Cooking  
Time  
Medium Rare  
(145°F) to  
Medium (160°F)  
(minutes)

	Beef Cut	Weight/Thickness	Distance from Heat (inches)	Approximate Total Cooking Time (minutes)
<b>Chuck</b>	Chuck Eye Steak	3/4 inch	2 to 3	8 to 11
		1 inch	3 to 4	12 to 15
	Flat Iron Steak	8 ounces each	3 to 4	12 to 15

	Ground Beef Patties	1/2 inch (4 ounces each)	2 to 3	12 to 13
	Cook to medium (160°F) doneness	3/4 inch (6 ounces each)	3 to 4	12 to 14

### PACIFIC RIM GRILLED STEAK & NOODLE SALAD

Scan here for the recipe and nutritional data.

# INDIRECT GRILLING

This technique is called indirect grilling, but it's more like roasting, which means indirect heat, lower temperature and longer cooking times.

1

### PREPARE THE BEEF

When you're ready to get started, pull the beef out of the fridge and season well. Depending on your recipe, now's the time to apply a rub, herbs or other spices.

2

### READY THE GRILL

Take a few minutes to configure your grill. As the name suggests, indirect grilling positions the beef away from the heat source instead of directly over it. If you're using charcoal, this means arranging the coals off to one side of the grill and cooking on the opposite side. If you're using gas, refer to your owner's manual and bring the grill to medium heat on one side only.

3

### LET IT BE (MOSTLY)

Keep the lid closed for best results. You should follow your recipe for timing, but also may want to use an oven-proof meat thermometer to confirm when time's almost up. Be careful not to overshoot your target temperature because it will continue to rise for several minutes after coming off the grill.

4

### GIVE IT A REST

Don't skip this step! Resting is essential to keep all those delicious juices from draining out of the meat, and makes the next step easier. The larger cuts that work best for indirect grilling generally need more time to rest—often up to 15–20 minutes. Set the meat on your cutting board or a serving tray and cover it loosely with aluminum foil (this is called “tenting”).

5

### CARVE & SERVE

When you're ready to carve, take care to not pierce the beef with a fork. Instead just use tongs to hold the roast in place. Depending on your recipe or desired presentation, slice the beef thinly across the grain and serve on a warm plate or tray.

### GLOSSARY

#### Drip Pan

An underrated component of any grill set-up, a drip pan—usually made of disposable foil—catches drippings from your meat, preventing dangerous flare-ups.

### COOKING TIP

Resting time is important because it allows the juices to stay in the meat, becoming easier to carve and serve.

**HERB-CRUSTED BEEF ROAST  
WITH PISTACHIO-LEEK PESTO**  
Scan here for the recipe and  
nutritional data.

# INDIRECT GRILLING GUIDELINES

	Beef Cut	Weight/Thickness	Approximate Total Cooking Time  Medium Rare (145°F) to Medium (160°F) for Roasts (minutes)
<b>Chuck</b>	Shoulder Roast, Boneless	2-1/2 pounds	2 to 2-1/2 hours
<b>Rib</b>	Back Ribs	5 pounds, cut into 2 to 4 rib sections	1 to 1-1/2 hours <i>(fork tender)</i>
<b>Sirloin</b>	Top Sirloin Petite Roast	1-1/2 to 2 pounds	40 to 55 minutes
	Tri-Tip Roast	1-1/2 to 2 pounds	35 to 45 minutes

# OVEN ROASTING

Oven roasting is considered a simple cooking method because it generally uses a lower temperature over a longer period of time, allowing you to "set it and forget it."

1

### PREHEAT & PREP

Set your oven and season the roast per your recipe. If you're planning to brown the roast before cooking (learn more about that in the next step), do it now. Otherwise, it's OK to skip to Step 3.

2

### WHEN IN DOUBT, SEAR

While it's possible to develop a crust through slow roasting, you may get tastier results by searing it over high heat at either the beginning or the end of the roasting time. Most recipes will specify whether and when to brown the meat, but when in doubt, a quick sear won't hurt.

3

### ARE WE DONE YET?

Place the beef fat-side-up in a roasting pan — preferably with a rack, so tip is centered in thickest part of beef, or resting in fat, taking care to avoid the bone (if cooking a bone-in roast). Cook as recommended, and be sure not to overshoot your target temp because it will continue to rise after pulling the roast from the oven.

4

### GIVE IT A REST

Transfer the roast to a carving tray or cutting board, then cover it loosely with aluminum foil (this is called "tenting") and let it rest awhile. Larger roasts need more time to rest, often up to 15–20 minutes. Those few extra minutes are a great opportunity to make an au jus from the reserved beef drippings.

5

### CARVE & SERVE

The most important tool for properly carving your roast is a sharp knife — be safe! If you're using a meat fork, don't pierce the roast to hold it in place. Use the back of the fork instead (tongs work great, too). If you have a rib roast, cut each slice along the rib bone. Always cut across the grain for maximum tenderness.

## OVEN ROASTING GUIDELINES

Beef Cut	Oven Temperature (preheated)	Weight (pounds)	Approximate Total Cooking Time	Remove Roast from oven when internal temperature reaches:
<b>Chuck</b> Petite Tender Roast	425°F	8 to 12 ounces	<b>Medium Rare:</b> 20 to 25 minutes	135°F
			<b>Medium:</b> 25 to 30 minutes	150°F
<b>Rib</b> Ribeye Roast, Boneless (small end)	350°F	3 to 4	<b>Medium Rare:</b> 1-1/2 to 1-3/4 hours	135°F
			<b>Medium:</b> 1-3/4 to 2 hours	145°F
			<b>Medium Rare:</b> 1-3/4 to 2 hours	135°F
		4 to 6	<b>Medium:</b> 2 to 2-1/4 hours	145°F
			<b>Medium Rare:</b> 2 to 2-1/4 hours	135°F
		6 to 8	<b>Medium:</b> 2 to 2-1/4 hours	145°F
			<b>Medium Rare:</b> 2-1/4 to 2-1/2 hours	135°F
Ribeye Roast, Boneless (large end)	350°F	3 to 4	<b>Medium Rare:</b> 1-1/2 to 2 hours	135°F
			<b>Medium:</b> 2 to 2-1/4 hours	145°F
			<b>Medium Rare:</b> 2 to 2-1/4 hours	135°F
		4 to 6	<b>Medium:</b> 2-1/4 to 2-1/2 hours	145°F
			<b>Medium Rare:</b> 2-1/4 to 2-1/2 hours	135°F
		6 to 8	<b>Medium:</b> 2-1/4 to 2-1/2 hours	145°F
			<b>Medium Rare:</b> 2-1/2 to 2-3/4 hours	135°F

### GLOSSARY

#### Au Jus

Pronounced oh-zhoo, it translates literally to "with juice." Au jus is a broth-like gravy made from beef juices left over from cooking.

### COOKING TIP

When roasting larger cuts, an ovenproof meat thermometer that stays in the roast while cooking is preferable to an instant-read thermometer. This helps you avoid opening the oven unnecessarily and poking multiple holes in the roast and losing those delicious juices.

Beef Cut	Oven Temperature (preheated)	Weight (pounds)	Approximate Total Cooking Time	Remove Roast from oven when internal temperature reaches:
Ribeye Roast, Bone-In	350°F	4 to 6 (2 ribs)	Medium Rare: 1-3/4 to 2-1/4 hours Medium: 2-1/4 to 2-3/4 hours	135°F 145°F
		6 to 8 (2 to 4 ribs)	Medium Rare: 2-1/4 to 2-1/2 hours Medium: 2-1/2 to 3 hours	135°F 145°F
		8 to 10 (4 to 5 ribs)	Medium Rare: 2-1/2 to 3 hours Medium: 3 to 3-1/2 hours	135°F 145°F
<b>Loin</b> Tenderloin Roast (well-trimmed)	425°F	2 to 3 (center-cut)	Medium Rare: 35 to 45 minutes Medium: 45 to 50 minutes	135°F 145°F
		4 to 5 (whole)	Medium Rare: 45 to 55 minutes Medium: 55 to 65 minutes	135°F 145°F
Strip Roast, Boneless	325°F	3 to 4	Medium Rare: 1-1/4 to 1-1/2 hours Medium: 1-1/2 to 1-3/4 hours	135°F 145°F
		4 to 6	Medium Rare: 1-1/2 to 1-3/4 hours Medium: 1-3/4 to 2 hours	135°F 145°F
		6 to 8	Medium Rare: 1-3/4 to 2 hours Medium: 2 to 2-1/4 hours	135°F 145°F
<b>Sirloin</b> Tri-Tip Roast	425°F	1-1/2 to 2	Medium Rare: 30 to 40 minutes Medium: 40 to 50 minutes	135°F 150°F
		2 to 3	Medium Rare: 40 to 50 minutes Medium: 50 to 60 minutes	135°F 150°F
<b>Round</b> Sirloin Tip Roast	325°F	3 to 4	Medium Rare: 1-3/4 to 2 hours Medium: 2 to 2-1/4 hours	140°F 150°F

Beef Cut	Oven Temperature (preheated)	Weight (pounds)	Approximate Total Cooking Time	Remove Roast from oven when internal temperature reaches:
<b>Round</b> Sirloin Tip Roast	325°F	4 to 6	Medium Rare: 2 to 2-1/4 hours Medium: 2-1/4 to 2-3/4 hours	135°F 150°F
		6 to 8	Medium Rare: 2-1/4 to 2-3/4 hours Medium: 2-3/4 to 3-1/4 hours	135°F 150°F
Sirloin Tip Center Roast	325°F	2 to 2-1/2	Medium Rare: 1-1/4 to 1-1/2 hours	135°F
Rump Roast, Bottom Round Roast	325°F	3 to 4	Medium Rare: 1-1/4 to 1-3/4 hours	135°F
Eye of Round Roast	325°F	2 to 3	Medium Rare: 1-1/4 to 1-1/2 hours	135°F
<b>Other</b> Ground Beef, Meatloaf	350°F	10 x 4-inch (2 pounds)	1-1/4 to 1-1/2 hours	160°F

## HOW TO CARVE A RIB ROAST

① Turn roast on its side and place on carving board. (If necessary, remove a thin slice to stabilize roast.) Insert fork from the side, below the top rib. Carve across the "face" of the roast toward the rib bone.

② Cut along the rib bone with tip of knife to release slice of beef. To serve, slide knife under beef slice; steadying from above with the fork and lifting slice onto plate.

### ASIAN STRIP FILETS WITH SOBA NOODLE AND VEGETABLE SALAD

Scan here for the recipe and nutritional data.

This method involves searing beef on the stovetop and finishing it in the oven. It works best for thicker cuts, which need a bit more cooking time to bring up the internal temperature. Well-seasoned cast iron works best, but any ovenproof, non-stick skillet will do.

1

#### PREP THE BEEF

Some recipes suggest coating each steak lightly with oil (or adding oil to the pan before searing), but we've found the fat content in most steaks is enough to go without. It's healthier and results in less smoke, too. Pat the steaks dry, and if you're using a spice blend, rub it in now, or just hit both sides with a few shakes of salt and pepper.

2

#### PREHEAT x 2

Preheat an oven-safe skillet over medium heat and the oven to 350°F, depending on your recipe. It's important to get both ready to go — and have a timer handy — because the next couple of steps will go by quickly.

3

#### SEAR WITHOUT FEAR

Slide your steak into the hot skillet and sear, no more than two minutes per side. Your only goal here is to give it a good crust — rich brown color. Trust your timer and flip only once.

4

#### MOVE TO OVEN

Now that you have that sweet sear on the outside, it's time to bring up the internal temp. Quickly flip the steak back over to the first side using tongs and slide the skillet into the preheated oven. Follow the timing guidelines and test for doneness with an instant-read thermometer. Be sure to pull the skillet as soon as the steak reaches your target temp because it will continue to rise for a few minutes.

5

#### REST & ENJOY

Transfer the steak immediately from the skillet to a serving plate or cutting board and cover loosely with aluminum foil (this is called "tenting"). As always, resting time is essential. Give it at least 5–7 minutes, then top it off with some compound butter or your favorite sauce.

# SKILLET- TO-OVEN

#### GLOSSARY

##### Smoke Point

This term refers to the temperature at which various cooking oils begin to break down and produce smoke. Oils with higher smoke points — such as canola, peanut or grapeseed — are better suited for cooking at higher temperatures.

#### COOKING TIP

Many recipes say to bring meat to room temperature before cooking, but we recommend against it for food safety reasons. Our cooking chart is based on straight-from-the-fridge timing.

**CLASSIC BEEF SLOPPY JOES**  
Scan here for the recipe and  
nutritional data.

## SKILLET-TO-OVEN GUIDELINES

	Beef Cut	Weight	Oven Temperature (preheated)	Approximate Total Cooking Time
<b>Chuck</b>	Flat Iron Steak	8 ounces each	425°F	Medium Rare: 13 to 19 minutes
<b>Rib</b>	Ribeye Filet	8 ounces each 1-3/4 to 2 inches thick	350°F	Medium Rare: 24 to 28 minutes
<b>Loin</b>	Tenderloin Steak	4 ounces each, 3/4 inch thick	400°F	Medium Rare: 15 to 20 minutes
		5 to 6 ounces each, 1-1/2 inches thick	350°F	Medium Rare: 15 to 23 minutes
	Strip Filet	8 ounces each, 1-3/4 to 2 inches thick	350°F	Medium Rare: 24 to 28 minutes
<b>Sirloin</b>	Top Sirloin Filet	8 ounces each, 1-3/4 to 2 inches thick	350°F	Medium Rare: 24 to 28 minutes

SKILLET  
COOKING

This is primarily a preparation technique for recipes that call for browned ground beef. But can also apply to cuts you might thinly slice before cooking — think Flank Steaks. Once the beef is cooked, it can go into a variety of recipes.

**1** **PREP & PREHEAT**  
 Pull meat directly from fridge and heat a large, heavy-bottomed skillet over medium heat. It's important to have a large skillet so there's plenty of room for the beef to brown evenly. If your recipe calls for more than a couple pounds of ground beef, it's OK to cook in batches.

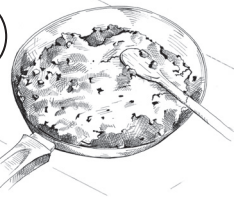

**2** **CRUMBLE & BROWN**  
 Use a wooden spoon or potato masher to break the ground beef into crumbles as you're cooking. Stir lightly to ensure even cooking. Depending on your recipe, you may need to brown the meat only lightly, because it will continue to cook later on.

**3** **DRAIN ... OR DON'T**  
 Most recipes call for the ground beef to be drained after browning, but in some recipes the drippings are left in for added moisture (and flavor). In extra-lean ground beef, there may not be much to drain at all.

**4** **SAVOR YOUR OPTIONS**  
 Now's the time to put that delicious ground beef to good use in your favorite recipe.

**GLOSSARY**  
**Seasoning**  
 We're not talking spices — in this case, seasoning is all about preparing a cast iron skillet for cooking. Methods may differ, but the end result of a well-seasoned pan is a non-stick surface and years (if not decades) of perfectly browned meat.

**COOKING TIP**  
 Use a potato masher to break up ground beef into small crumbles while browning.

# SKILLET COOKING GUIDELINES

	Beef Cut	Weight/Thickness	Approximate Total Cooking Time Medium Rare (145°F) To Medium (160°F) (minutes)
<b>Chuck</b>	Chuck Eye Steak, Boneless	3/4 inch	9 to 11
		1 inch	12 to 15
	Top Blade Steak	3/4 inch	11 to 13
		1 inch	13 to 17
	Flat Iron Steak	8 ounces each	11 to 14
	Ranch Steak (marinate)	3/4 inch	8 to 11
		1 inch	12 to 15
	Petite Tender Medallions	1/2 to 3/4 inch	4 to 6*
	Denver Steak	1/2 inch	3 to 4*
		3/4 inch	7 to 10
		1 inch	11 to 15
<b>Rib</b>	Ribeye Steak, Boneless	3/4 inch	8 to 11
		1 inch	12 to 15
<b>Loin</b>	Porterhouse/T-Bone Steak	3/4 inch	10 to 13
		1 inch	14 to 17
	Strip Steak, Boneless	3/4 inch	8 to 11
		1 inch	12 to 15
	Tenderloin Steak	1/2 inch	3 to 5*
		3/4 inch	7 to 10
		1 inch	10 to 13

\*Use medium-high heat

	Beef Cut	Weight/Thickness	Approximate Total Cooking Time Medium Rare (145°F) To Medium (160°F) (minutes)
<b>Sirloin</b>	Top Sirloin Steak	3/4 inch	12 to 15
		1 inch	15 to 18
	Tri-Tip Steak	3/4 inch	9 to 12
		1 inch	13 to 16
<b>Round</b>	<i>Recommend cooking Round cuts to medium rare (145°F) doneness only</i>		
	Top Round Steak (marinate)	3/4 inch	12 to 15
		1 inch	15 to 17
	Eye of Round Steak	3/4 inch	8 to 10
		1 inch	11 to 13
	Bottom Round Steak (marinate)	3/4 inch	11 to 14
		1 inch	16 to 22
	Sirloin Tip Center Steak	3/4 inch	11 to 13
		1 inch	14 to 15
	Sirloin Tip Side Steak (marinate)	3/4 inch	10 to 12
		1 inch	13 to 15
<b>Other</b>	Ground Beef Crumbles	1 pound	8 to 10
	Ground Beef Patties	1/2" (4 ounces each)	10 to 12
	<i>Cook to medium (160°F) doneness</i>	3/4" (6 ounces each)	14 to 16

\*Use medium-high heat

A cast iron skillet maintains heat and browns ground beef and steaks beautifully.

**RED-EYE BEEF STEW**  
Scan here for the recipe and nutritional data.

# STEWING

This is a slow-cooking method, similar to braising, with the key difference being the beef is covered in liquid. Stewing is best done in a heavy stockpot or Dutch oven on the stovetop or in the oven, or in a slow cooker.

1

**CUT & DREDGE**

If you're using pre-packaged (or cutting your own) chunks, make sure they're not too small to prevent overcooking. Aim for cubes about 1-inch square. Many stew recipes call for dredging the beef in seasoned flour before browning.

2

**BROWN THE BEEF**

Heat a drizzle of oil in the pan over medium heat and brown the meat on all sides, and drain (unless your recipe says to leave the drippings). You may need to work in batches if using a smaller pan. If you're using a slow cooker, transfer it over.

3

**ALL TOGETHER NOW**

Depending on your recipe, now's the time to add seasonings, vegetables and liquid — such as beef broth, wine, beer, juice or even water. Bring the liquid to a boil, then reduce heat to low and cover with a tight-fitting lid.

4

**SIMMER & STEW**

Follow your recipe for timing guidelines. Don't lift the lid — unless your recipe calls for adding vegetables or other ingredients later on. You'll know it's done when the beef is fork tender.

**GLOSSARY**

**Dredging**

This describes the process of coating the meat with seasoned flour before cooking. Dredging not only seals in moisture and adds flavor, but also helps keep the meat from sticking to the pan while browning.

**COOKING TIP**

Use a tight-fitting lid and keep it on while stewing to prevent moisture and heat loss, which can impact cooking time.

**ASIAN BEEF STIR-FRY**  
Scan here for the recipe and nutritional data.

**STIR-FRY**

Skip the takeout — it's just as fast (and fresher) to cook this simple one-pot meal at home. Stir-frying is best done with bite-sized pieces of food and lots of added flavors from aromatics (garlic, ginger, scallion) and Asian condiments (soy, hoisin, chili paste, etc.).

1

### PREP & PREHEAT

This is a quick-cook technique, so it's important to have all your ingredients prepped and ready to go. Preheat the wok or skillet and add cooking oil per your recipe guidelines.

2

### COOK THE BEEF

Some recipes recommend cooking the beef completely before moving on to the next step, while others call for giving the beef a quick brown, then removing it from the pan, cooking the vegetables, and returning it to the pan to finish. You can quickly pull out a piece of beef to test for doneness.

3

### VEGGIE TIME

Follow recipe guidelines, but generally it's important to cook things in order depending on how quickly they cook — onions first, then firm veggies such as broccoli and carrots, and finally leafy ingredients such as spinach.

4

### SAUCE IT UP

Now's the time to add the ingredients for a sauce, or even a bottled sauce, depending on your recipe. Stir well to ensure the beef and vegetables are evenly coated.

5

### SERVE & SAVOR

Most stir-fry recipes go straight from pan to plate, and are often served over rice, noodles, or spiralized vegetables.

### GLOSSARY

#### Smoke Point

This term refers to the temperature at which various cooking oils begin to break down and produce smoke. Oils with higher smoke points — such as canola, peanut or grapeseed — are better suited for cooking at higher temperatures.

### COOKING TIP

Placing your beef in the freezer for around 30 minutes makes it easier to slice.

### NORTH AFRICAN HARISSA-BRAISED BEEF STEW

Scan here for the recipe and nutritional data.

# PRESSURE COOKING

Thanks to the popularity of new programmable electric models, busy home cooks are rediscovering how pressure cookers deliver fork-tender results in a fraction of the time needed for braising or slow-cooking. As always, carefully follow the manufacturer's recommendations for safe operation.

1

### COVER THE BASICS

Double-check to make sure the gasket on your pressure cooker is clean and crack-free, and the vent tube isn't clogged. Remember that pressure cookers require a minimum amount of liquid and a maximum amount of food to function properly. Depending on the model and recipe, your pressure cooker may take up to 20 minutes to build up pressure.

2

### BROWN & DEGLAZE

Many modern pressure cookers have a "brown" setting, but you can always give your beef a quick sear on the stovetop. For extra flavor, add a small amount of liquid — such as beef broth, wine, juice or even water — to the hot pan and scrape up any crusty bits sticking to the bottom before transferring it to the pressure cooker.

3

### SET & FORGET

Follow recipe guidelines and trust the timer. Keep in mind most pressure cookers include a safety feature that prevents the lid from being opened while the contents are under pressure.

4

### RELEASE THE PRESSURE

There are two methods for releasing pressure from your pressure cooker: quick release and natural release. The quick release method involves manually opening the pressure release valve, while the natural release method involves turning off the heat and allowing the pressure to drop on its own. **For best results, we recommend letting the pressure release naturally.** Be sure to refer to your user manual for specific instructions.

5

### SERVE & SAVOR

Many pressure cooker recipes are for one-pot meals that can go straight to the table, while some recipes make ingredients to be used in other recipes. Either way, when you follow the guidelines for preparation and safe operation, you're sure to get a great-tasting dish.

#### GLOSSARY

##### Gasket

Also known as a "sealing ring," this part is responsible for maintaining an airtight seal under high pressure. It's made of dishwasher-safe silicone in modern pressure cookers.

#### COOKING TIP

Cover the pressure release valve on your pressure cooker with a kitchen towel to avoid steam burns.

Beef has the taste you crave while providing an excellent source of high-quality protein and containing 9 other essential nutrients.

On average, a 3-ounce serving of cooked beef gives your body more than 10 percent of the Daily Value\* (DV) of these 10 essential nutrients in only 175 calories.<sup>1</sup>

#### PROTEIN — 51% DV

A key foundational nutrient for supporting strength, protein plays an important role in building muscle, maintaining a healthy body weight, fueling recovery after physical activity, helping feelings of fullness after meals, and supporting brain and immune system function.<sup>2</sup>

#### IRON — 14% DV

An essential nutrient for both the function and growth of your body,<sup>3</sup> it is estimated that more than 5.5 percent of the U.S. population suffers from iron-deficiency anemia.<sup>4</sup> Iron is responsible for taking oxygen from your lungs and shuttling it to every cell in your body.

#### ZINC — 39% DV

Zinc is an important mineral for strength.<sup>5</sup> The brain has a significant concentration of zinc, making it a key nutrient for proper growth and to strengthen communications between neurons.<sup>6</sup> Zinc also supports a healthy immune system.

#### SELENIUM — 38% DV

Selenium is an essential component of at least 25 unique compounds that have a big impact on proper immune, thyroid, cardiovascular and digestive function.<sup>7</sup> Selenium plays an important role as a primary antioxidant in the liver, the main detoxification site in the body.<sup>8</sup>

#### VITAMIN B<sub>6</sub> — 24% DV

Vitamin B<sub>6</sub> supports the metabolism of amino acids and fatty acids. Vitamin B<sub>6</sub> influences cognitive development, immune function, and the activity of steroid hormones.<sup>9</sup>

#### NIACIN (Vitamin B<sub>3</sub>) — 25% DV

To help the body produce energy from food, Niacin supports fat synthesis, tissue respiration and utilization of carbohydrate. Niacin promotes healthy skin, nerves and digestive tract; and fosters normal appetite.<sup>9</sup>

#### RIBOFLAVIN — 14% DV

Essential for the energy-producing machines in your cells, Riboflavin supports normal vision and healthy skin.<sup>9</sup>

#### VITAMIN B<sub>12</sub> — 41% DV

Vitamin B<sub>12</sub> is an essential component in the production of red blood cells and is one of the nutrients responsible for maintaining the protective coating on your nerves. It supports the developing brains of young children.<sup>10</sup>

#### CHOLINE — 13% DV

The brain and nervous system need choline to regulate memory, mood, muscle control, and other functions. Choline also preserves the structural integrity of all plant and animal cells by helping to form the membranes that surround the cells.<sup>11</sup>

#### PHOSPHORUS — 20% DV

Phosphorus is present in every cell of the body and makes up 1% of a person's total body weight. Its main function is the formation of bones and teeth. Phosphorus also helps the body make protein for the growth, maintenance and repair of cells.<sup>12</sup>

# Get Your Strength From Beef

Beef can support an active and healthy lifestyle. The nutrients in beef provide our bodies with the strength to thrive throughout all stages of life. Here are some highlights of information you will find at [BeefItsWhatsForDinner.com](http://BeefItsWhatsForDinner.com):

# Raising Beef

## BEEF QUALITY ASSURANCE: RAISING THE BAR ON RAISING CATTLE

The beef community has a long-standing commitment to caring for their animals and providing families with the safest, highest-quality beef possible. Beef Quality Assurance (BQA) is a program that trains farmers and ranchers on best practice cattle management techniques to ensure their animals and the environment are cared for within a standard set of guidelines and regulations across the U.S. beef industry.

### LEAN BEEF

We all know that beef tastes great, but did you know how good it is for you too? A 3 oz. cooked serving of lean beef provides 10 essential nutrients in around 170 calories, less than 10 grams of total fat and less than 95 mg of cholesterol.<sup>1</sup>

### STAYING IN SHAPE STARTS...

...on the plate. No athlete wants to be sidelined because they aren't in the best shape. And, you probably don't want to sit on the sidelines in life. The food you eat should give you maximum energy, help you build your body from the inside out and support overall health. A 3 oz. serving of beef is packed with 10 important nutrients that help you meet your daily needs.<sup>1</sup> To get all of these nutrients from other sources you would need to eat far more food, costing you in terms of money spent and calories consumed. Keep beef on your plate if you want to perform your best.

### BEEF AND HEART HEALTH

Research on heart health shows that eating lean beef can be a solution to one of America's greatest health challenges. Not only can lean beef be part of a heart-healthy diet, but it can help lower cholesterol as part of a healthy diet and lifestyle.<sup>2,4</sup>

### THE CONNECTION BETWEEN BEEF'S PROTEIN AND STRENGTH

Beef's nutrients, along with a healthy lifestyle, work to provide our bodies and minds with the fuel to be the strongest versions of ourselves, at all stages of life.<sup>5</sup>

### BEEF'S PROTEIN

If there was a protein contest, beef would surely be crowned the king! One 3 oz. cooked serving of beef provides 25 grams, roughly 50% of your Daily Value, of this important nutrient that supports strong, lean bodies—making it an excellent source!<sup>1</sup>

### WHAT IT MEANS TO BE BEEF QUALITY ASSURANCE (BQA) CERTIFIED

Simply put, BQA helps beef farmers and ranchers raise better beef so consumers can feel even better about buying it. But it's not always that simple, of course. Raising quality beef requires commitment and hard work. Certification is earned, not bought. For beef farmers and ranchers, that means using modern techniques to raise cattle under optimal environmental and economic conditions. For consumers, it means knowing the beef they buy is wholesome and delicious. In fact, more than 85% of U.S. beef comes from BQA-certified farmers and ranchers.

### CATTLE CARE

The beef that farmers and ranchers raise is the same beef they feed their own families, so it's no surprise that they take the best care for their livestock to ensure everyone has wholesome, safe, nutritious beef.

### HERD HEALTH

Farmers and ranchers develop and maintain herd health plans that follow good veterinary and agriculture practices based on scientific research.

### TRANSPORTING CATTLE

When transporting cattle, farmers and ranchers ensure they are handling the cattle in ways that minimizes stress, injury and bruising.

### RECORD KEEPING

Farmers and ranchers keep diligent records on the care and treatment given to each animal to ensure the animal's and public's health and safety is the top priority.

### CATTLE NUTRITION

Beef farmers and ranchers make sure that cattle have access to an adequate water supply and appropriate nutrition sources.

### ENVIRONMENTAL STEWARDSHIP

Farmers and ranchers monitor key environmental control areas to manage feed and water resources while protecting or enhancing the environment.

# Raising Beef

## ENVIRONMENTAL, SOCIAL & ECONOMIC IMPACT

Not only is beef delicious and nutritious, but the beef industry continues to implement numerous proven sustainability practices throughout each and every step of the “pasture-to-plate” process that contribute to the way beef is responsibly raised today.

Though the path to sustainability is never complete. It is a continuous journey being carried out by farmers and ranchers responsible for raising and supplying beef to the U.S. and across the world. To the beef community, sustainability comprises much more than environmental considerations. Today, a sustainable food supply balances efficient production with environmental, social and economic impacts.

## THREE PILLARS OF SUSTAINABILITY

A sustainable food system is comprised of three different, but intersecting, pillars: social responsibility, economic viability and environmental stewardship. True sustainability is a balance of these three aspects. Beef farmers and ranchers are dedicated to producing beef in a way that prioritizes the planet, people, animals, and progress.

### SOCIAL

Perhaps the least explored of the three pillars is social sustainability. We define this as community and organizational resilience, based on principles such as equity, health, social capital, and well-being. For beef production, social sustainability includes worker safety, animal welfare, antibiotic and technology use, and the culture and traditions of beef producers.

### ECONOMIC

The economic pillar of sustainability refers to practices that support economic success and equitability, without negatively impacting the social and environmental aspects of the community. This includes improving rural economies & livelihoods, affordability of beef to consumers, profitability of beef producers, and the value of ecosystem services. Beef farms and ranches represent over 30% of the farms in the U.S., making up the single largest segment of U.S. agriculture, and a significant component of the agricultural economy!

### ENVIRONMENTAL

This area is concerned with protecting and enhancing natural resources, ecosystem services, and ecological health. This pillar looks at biodiversity, carbon & water footprints, wildlife habitat, soil and rangeland health, and the ability of cattle to eat things that humans can't, such as grass and forages.

### BEEF'S TOP 10

\* *The Daily Value (DV) is the amount of a nutrient needed for a healthy adult on a 2,000-calorie diet. The DV is the percent of a nutrient's Daily Value provided by a serving of food. For example, if a food has 50% of the DV for protein, then it provides 50% of the protein an adult needs each day. Even if your diet is higher or lower in calories, you can still use the DV as a guide to whether a food is high or low in a specific nutrient.*
